Design

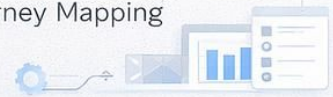

UX PROCESS

RESEARCH

Gather user insights through interviews and surveys. Analyze competitors and define user personas and journeys.

- User Interviews & Surveys
- Competitive Analysis
- Persona Development
- User Journey Mapping

WIREFRAME

Create low-fidelity wireframes to define the structure and layout. Design navigation and test basic prototypes.

- Low-Fidelity Sketches
- Layout & Structure
- Navigation Design
- Prototype Testing

FINAL UI

Design the final high-fidelity UI with colors, typography, and UI elements. Create prototypes and gather user feedback to refine interactions.

- High-Fidelity Mockups
- UI Design System
- Prototyping & Testing
- User Feedback

WHY UI MATTERS

The Tale of Two Screens

The challenge

Reimagine social media for the next generation.

> **You are a PM + Product Designer in 2030. Design a social product that solves a problem today's social media doesn't solve well.**

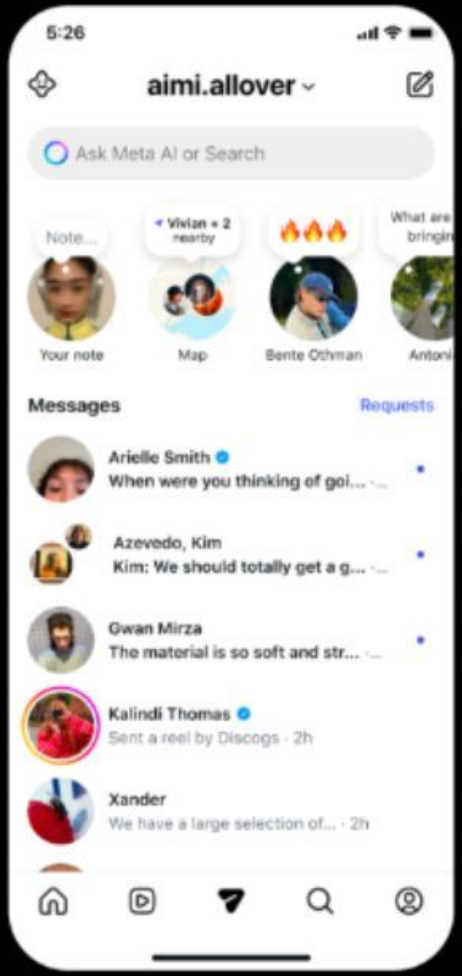

What assumptions does today's social media make?

Which assumptions might change by 2030?

Design

The 4 Activities

1. Break Today's Social Media

Question: What assumptions are we making today?

2. Design the Experience

Question: What problem are we solving, for whom, and how?

3. Low-Fidelity → Figma

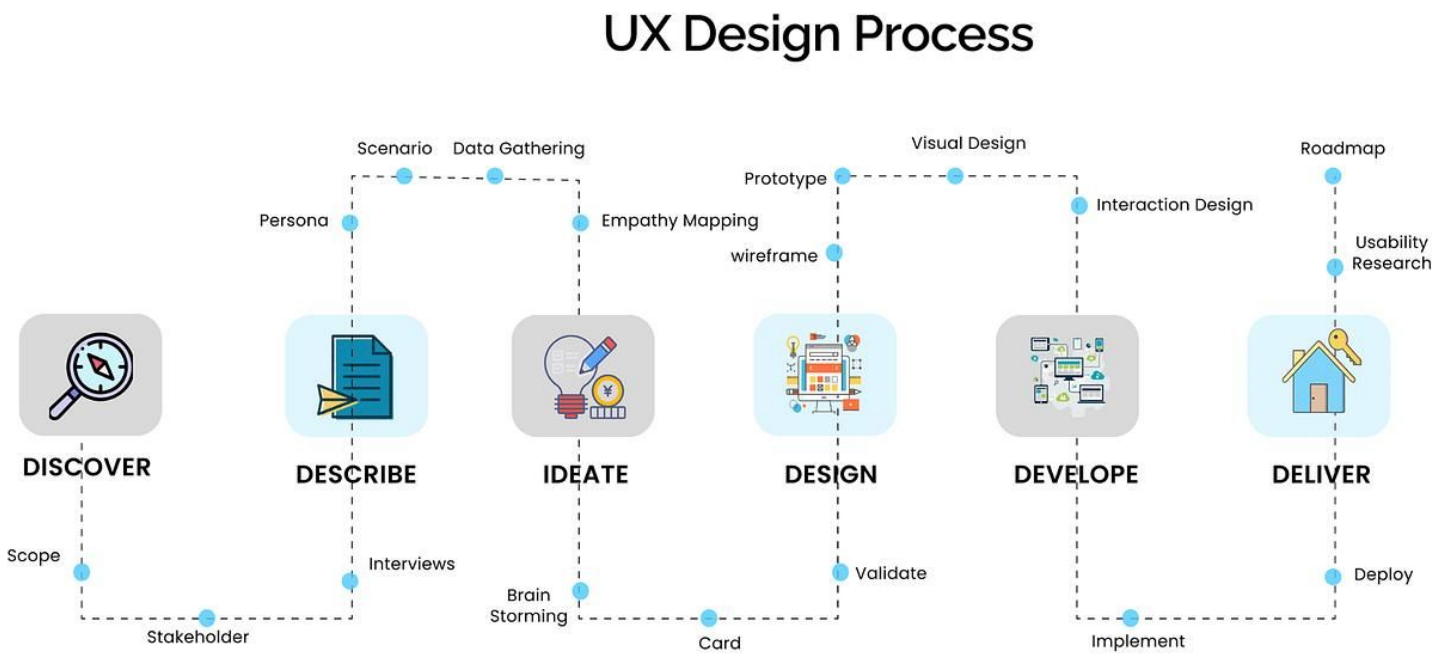

Question: Does the experience actually work?

4. High-Fidelity → Prototype

Question: Can we make the experience clear, usable and desirable?

Product Design ≠ UI Design

Product Design - Solving a user problem through an effective experience.

PRODUCT THINKING → why are we designing this?
FIGMA → how do we turn the thinking into an experience?

Pick your assumption to break

USER + PROBLEM + JTBD | Now bring them back from futuristic thinking.

Don't design for "everyone."

WHO? Who is your user?

WHAT? What problem do they have?

WHY? Why does the problem matter?

JTBD | When I <situation> _____, I want to <motivation> _____, so that _____<benefit>

5 Mins

1. The Silent Consumer

User: A young professional who consumes hours of social content but rarely posts or interacts.

Problem: Today's platforms reward creators and highly active users, while passive users often feel like spectators.

JTBD:

> When I open social media after a long day, I want to discover things that genuinely interest me without feeling pressured to post or engage, so that social media feels valuable rather than exhausting.

Potential product direction: A social platform optimized around **personal discovery rather than public performance**.

The Niche Enthusiast

User: A person with a very specific hobby, such as mechanical keyboards, urban sketching or vintage cameras.

Problem: Large platforms bury niche communities under mainstream content and engagement-driven recommendations.

JTBD:

> When I want to explore a niche interest, I want to find people who are genuinely passionate about it, so that I can learn, exchange ideas and build a community.

Potential product direction: Social networks organized around **depth of interest rather than follower count**.

The Authenticity Seeker

User: A Gen Z user increasingly skeptical of AI-generated and heavily edited content.

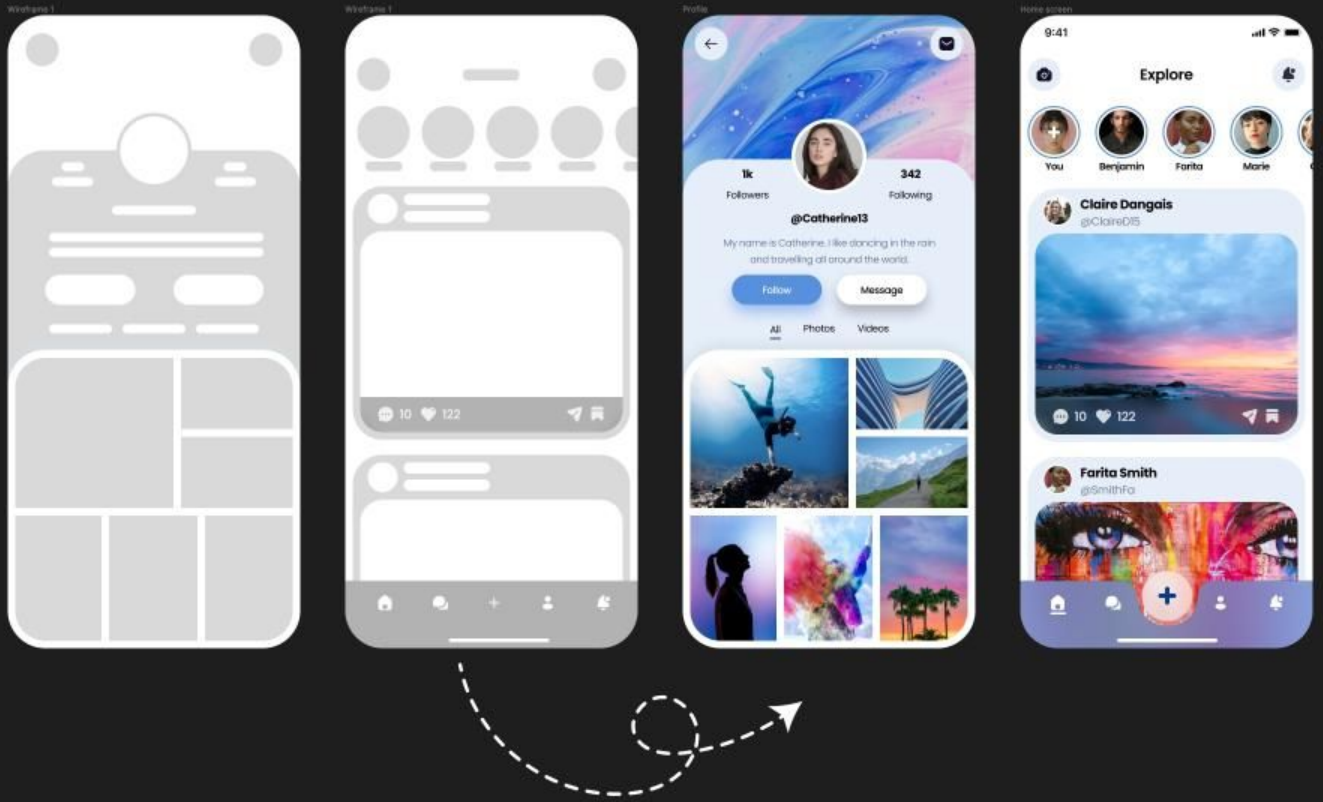

Problem: As synthetic content increases, users may find it harder to understand what is real, edited or AI-generated.

JTBD:

> When I see something interesting online, I want to understand where it came from and how it was created, so that I can decide whether I trust it.

Potential product direction: Social built around **provenance, authenticity and context**.

LOCATION

Organize by WHERE

Think: **Map, geography, physical position**

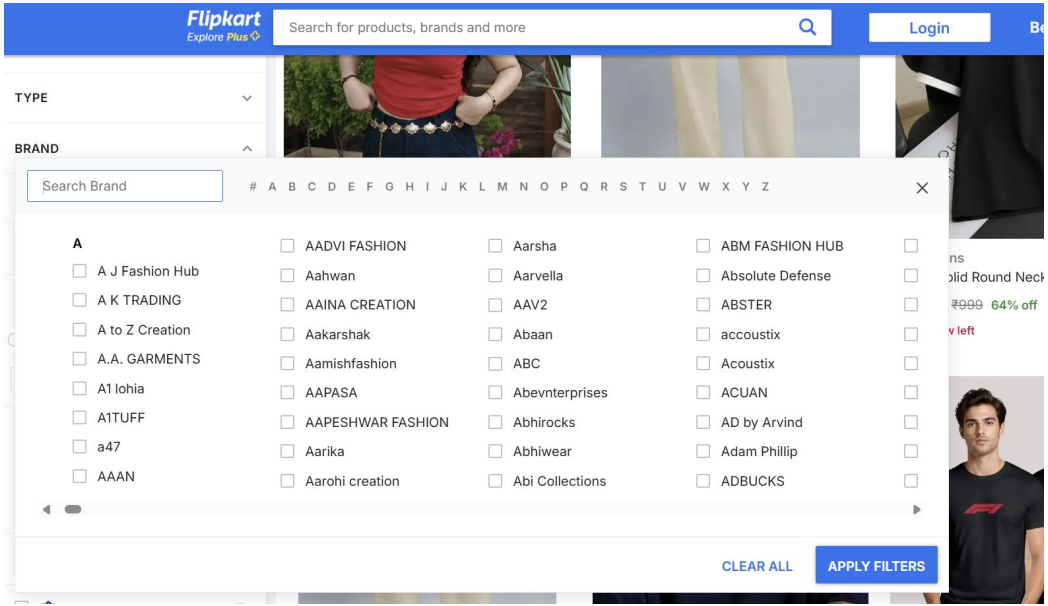

Does where something is matter to the user's decision?

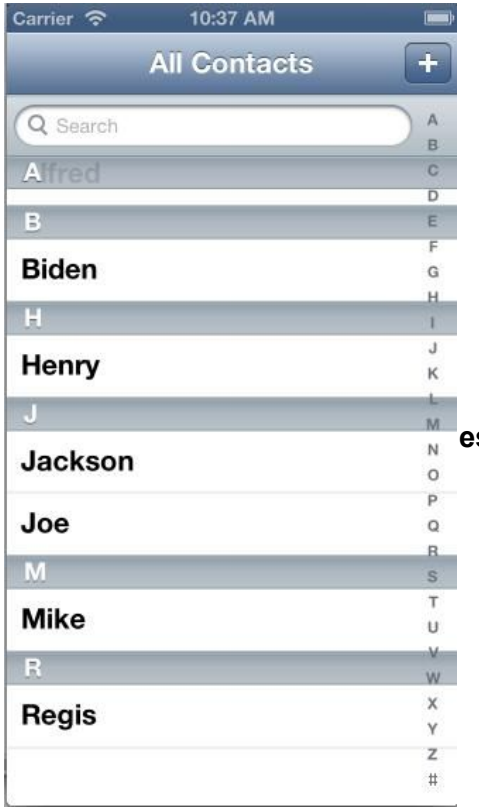

For Social app
People near me → Communities near me → Events near me

A ALPHABET

Organize by **A → Z**

Think: **I know what I'm looking for**

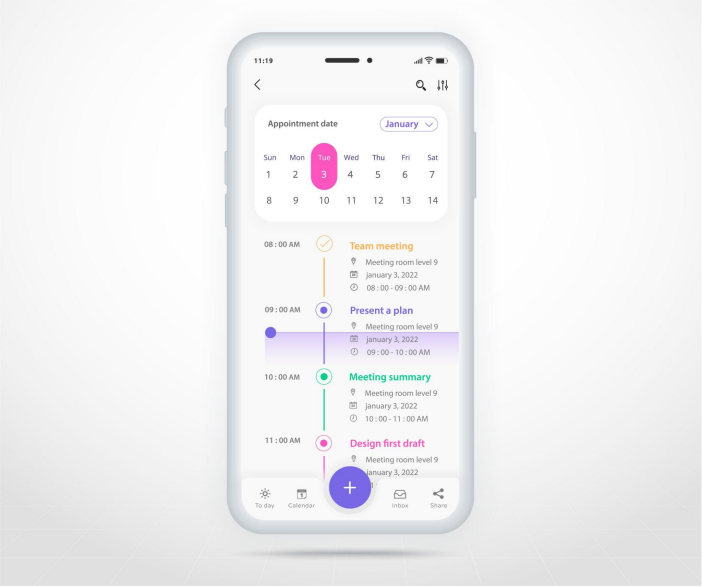

es

Time

Organize by WHEN

Think: **Before → Now → Later**

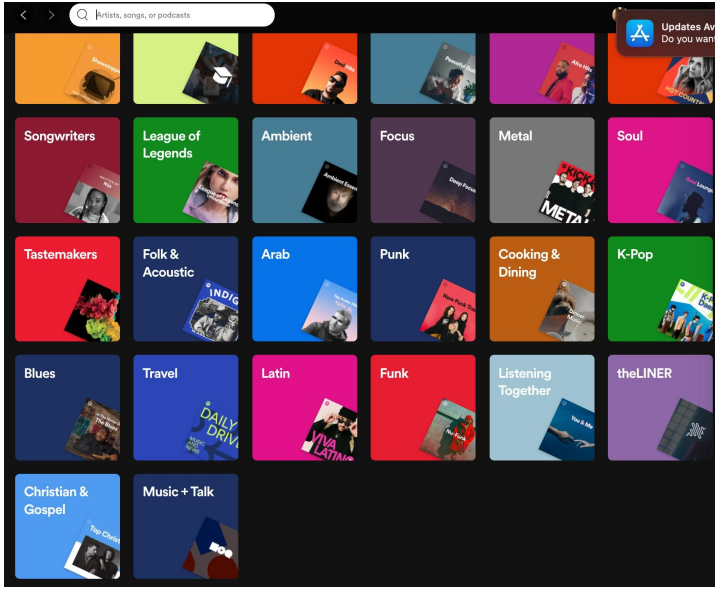

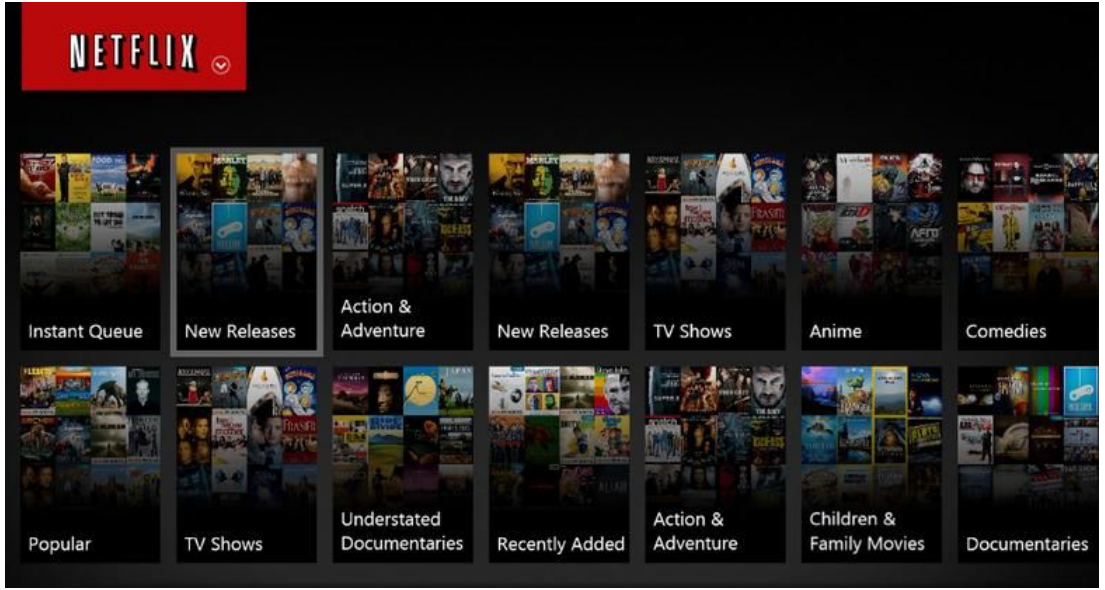

C Category

Organize by WHAT IT IS

Think: **Group similar things together**

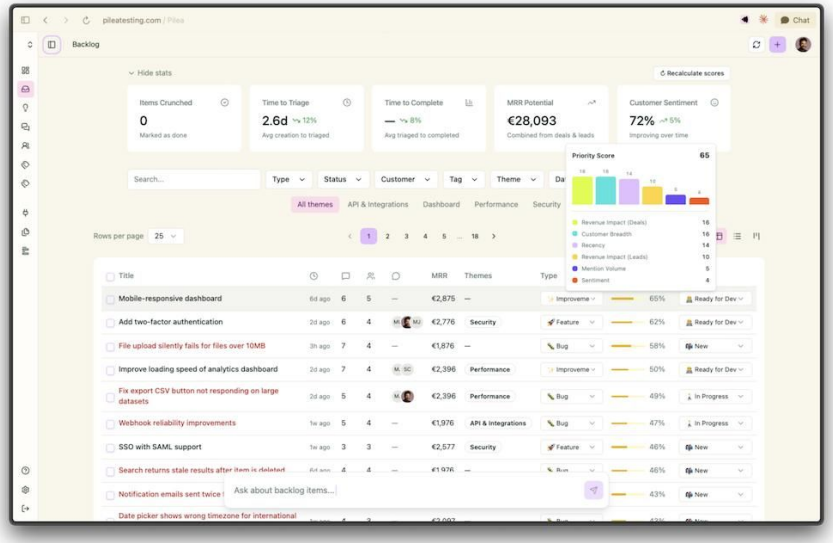

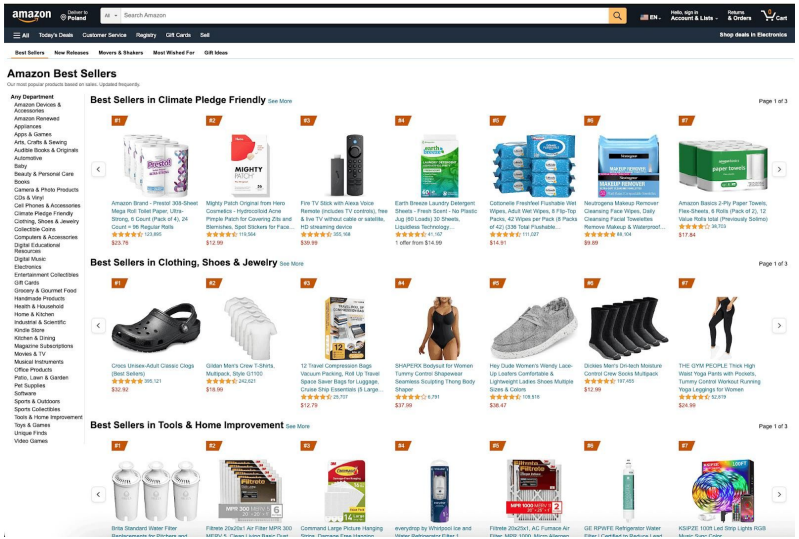

H HIERARCHY

Organize by IMPORTANCE / MAGNITUDE / PRIORITY

Think:**Most important → Least important**

5 ways to organize information.

LATCH By Richard Saul Wurman

UX INFORMATION ARCHITECTURE

LATCH

LOCATION

App/website asks for location Usually displays information based on the location like checking certain spots, helps users find another like-minded people nearby, can also be displayed as an actual map, among others.

Example: When using Uber, Lyft or any other delivery service.

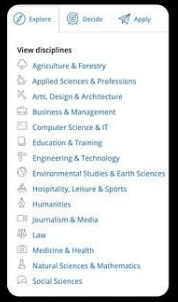

UBER app

ALPHABETICAL

Used for organizing large bodies of information, such as words in a dictionary or names in a telephone directory.

Example: Searching for schools that are organized by disciplines.

https://studyportals.com/

TIME

Used when organizing information that happens sequentially, such as TV schedules, historical timelines, or a step by step procedure.

Example: shopping wine by vintage.

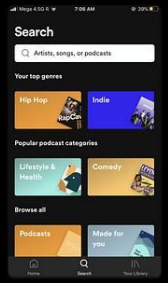

www.wine.com/

CATEGORY

Used when organizing information that has oblivious clusters or groups. This is the most prevalent!

Example: When browsing music or podcasts.

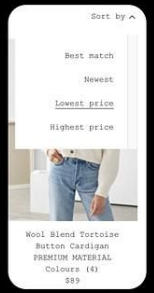

Spotify app

HIERARCHY (MAGNITUDE)

Use when organizing information that can be illustrated with numbers or units, such as small to large, order importance, etc.

Example: When sorting items by lowest price.

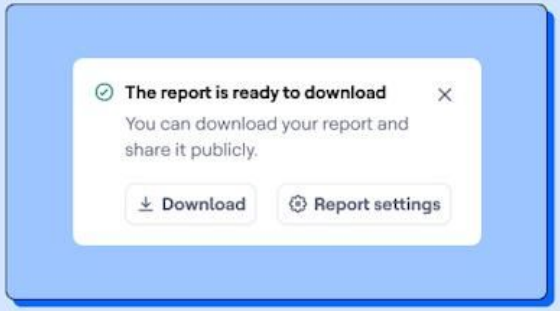

www.stories.com/

*All of them tend to be combined

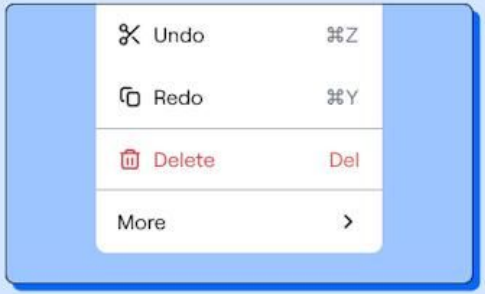

Build your IA

10 Key usability heuristics

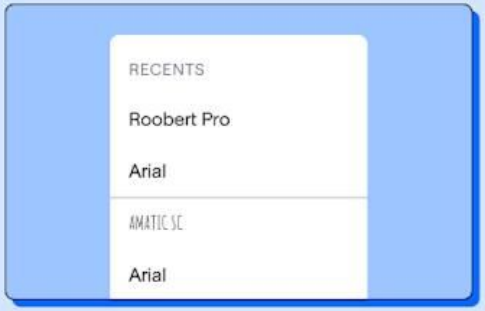

1. Visibility of system status

3. User control & freedom

6. Recognition rather than recall

7. Flexibility & efficiency of use

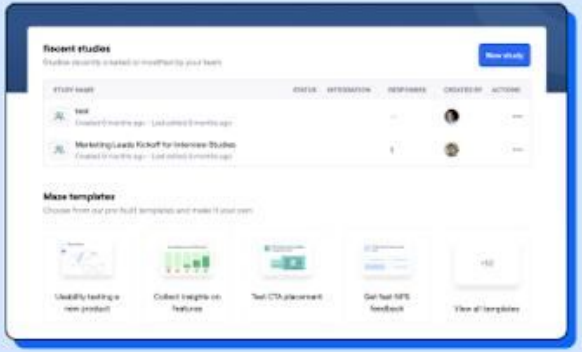

2. Match between system and the real world

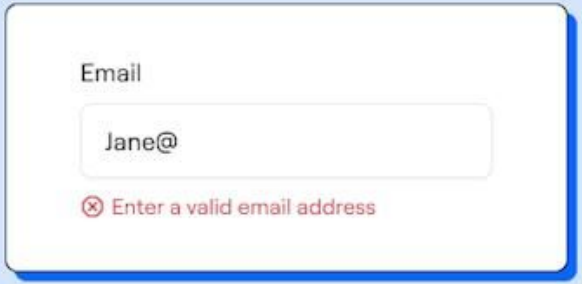

4. Consistency & Standard

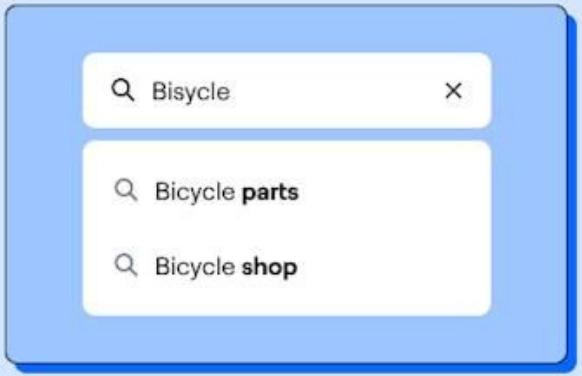

8. Aesthetic & minimalist design

9. Help users recognize & recover from errors

5. Error prevention

10. Help & documentation

.

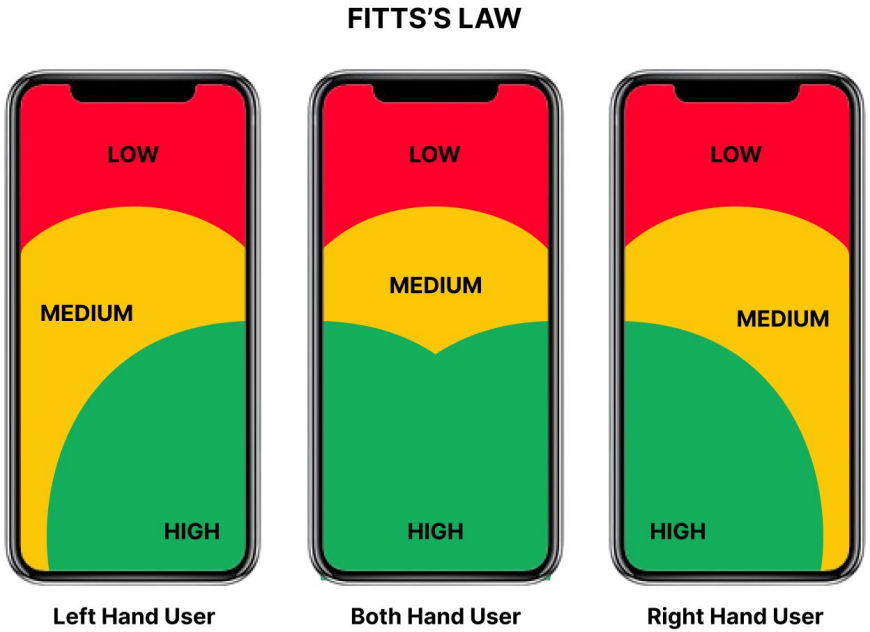

FITTS'S LAW

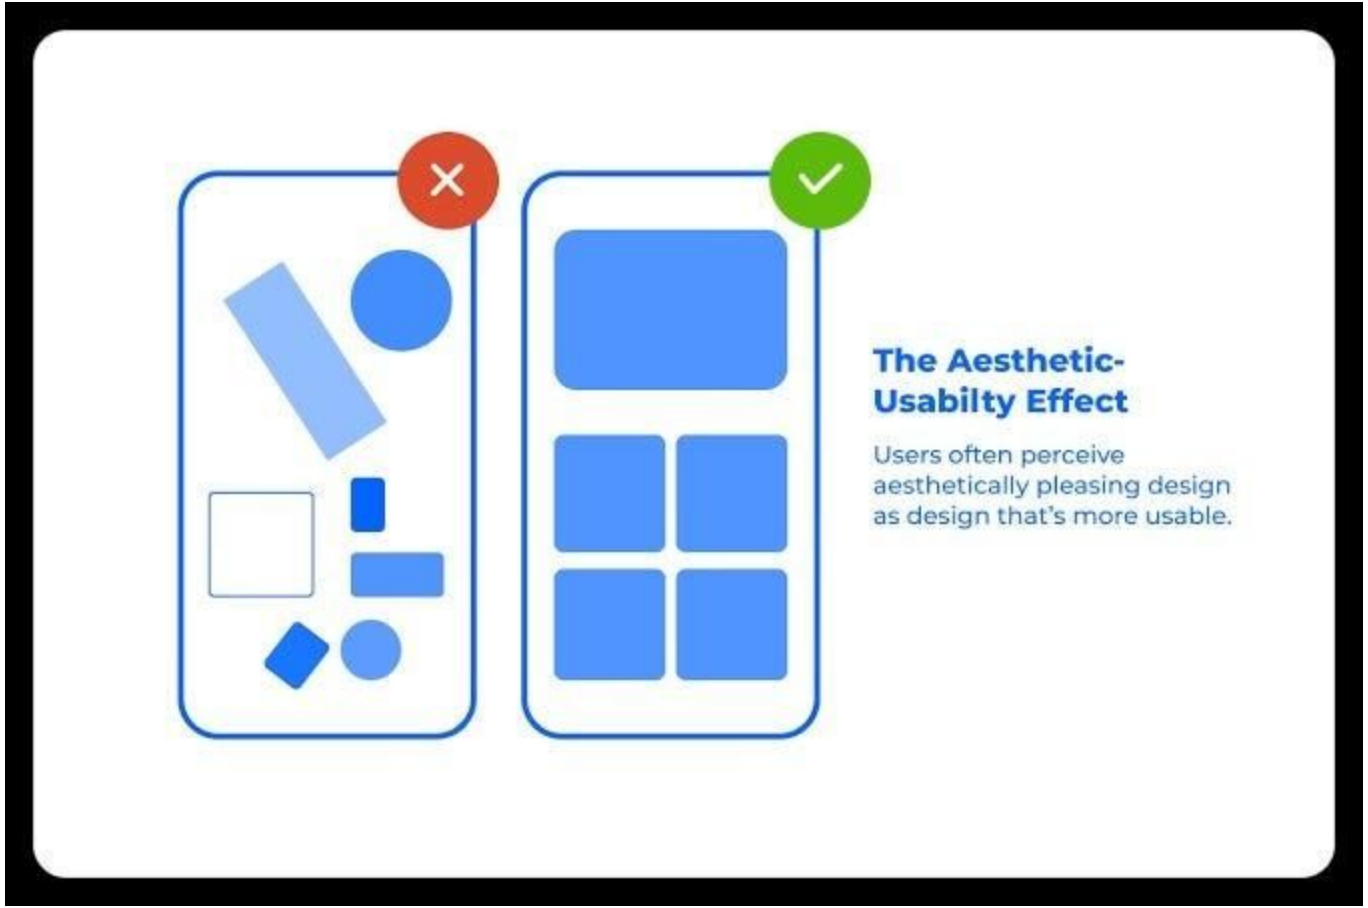

LAW OF UX

THE TIME TO ACQUIRE A TARGET IS A FUNCTION OF THE DISTANCE TO AND SIZE OF THE TARGET

Make elements you wish to be easily selectable large and position them close to users.

The Aesthetic-
Usabilty Effect
Users often perceive
aesthetically pleasing design
as design that's more usable.

Aesthetic Usability Effect

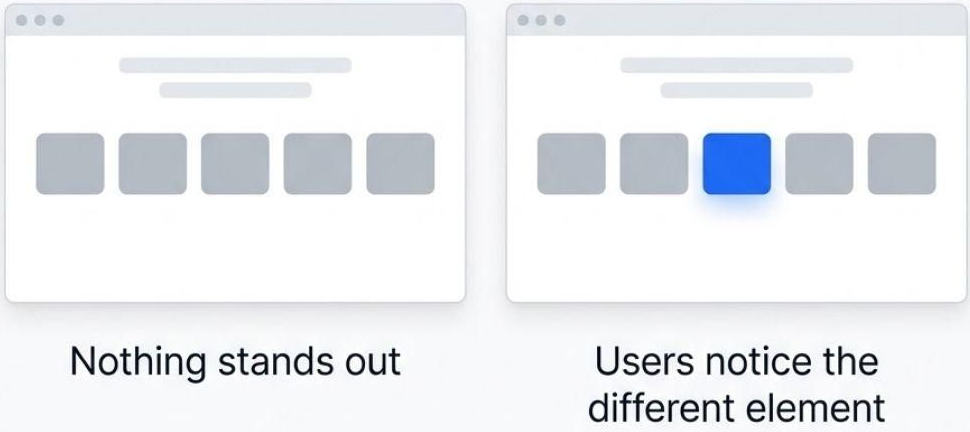

vs

#UX Insight

Von Restorff Effect

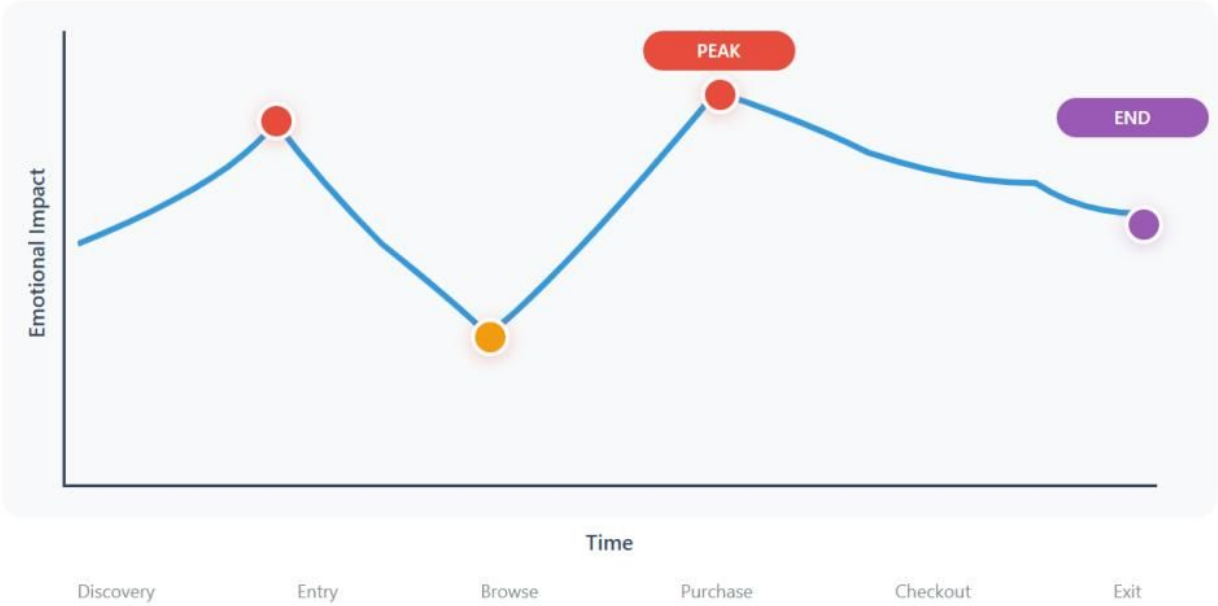

When one item looks **different**, it get noticed.

Design Important actions differently.

The Peak-End Rule in Customer Experience

How customers remember experiences based on peaks and endings

Key Insight

Customers don't average their experiences—they judge them based on the highest emotional point (peak) and how it ended. This means one amazing moment can transform an entire customer journey.
